Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the

international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 16- 31 are rejected under 35 U.S.C. 102(b or e) as being anticipated by JP 2000001608 note pages 3-5, table 1 and 2 of the translation provided herein.

JP 2000001608 discloses a polycarbonate resin composition useful for the production of a substrate for an optical recording medium having a large memory capacity, and manifesting good mold-releasing properties at a high molding temperature and mold temperature by including a metal without an alkali metal in a specific amount or less, and a fatty acid ester of a polyhydric alcohol.

The polycarbonate resin composition contains ≤ 0.5 ppm metal without an alkali metal, and 100-1,000 ppm fatty acid ester of a polyhydric alcohol as a mold releasing agent. The composition is obtained by compounding the mold releasing agent with a polycarbonate resin. 2,2-Bis(4-hydroxyphenyl)propane or the like is cited as a phenolic compound of a raw material of the polycarbonate. Glycerol monostearate or the like are disclosed as usable as the fatty acid ester of the polyhydric alcohol.

Thus, JP 2000001608 discloses a a polycarbonate resin comosition and a optical disc substrate made therefrom prepared from the same components as claimed by applicants. The viscosity average molecular weight and iron content are also disclosed. Further, each subsequent limitation in the dependent claims, such as the releasing agent, as noted above, including the particular fatty acid esters as claimed are also

disclosed therein. Any properties or characteristics inherent in the prior art, e.g. hydroxy end group content, although unobserved or detected by the reference, would still anticipate the claimed invention since the method for making the composition including the conditions therein appear to be identical. Thus, in view of the above, there appears to be no significant difference between the reference and that which is claimed by applicant(s). Any differences not specifically mentioned appear to be conventional. Consequently, the claimed invention cannot be deemed as novel and accordingly is unpatentable.
